Analytical Economics graduate specializing in aviation market research and logistics analysis

RESEARCH AND ANALYTICS EXPERIENCE

Divergent Transpacific Corridors: Evaluating the Viability of U.S.-Fukuoka Service

June 2026

- Analyzed post-COVID transpacific recovery using BTS T-100, DOT Form 41, and airline financial disclosures to identify capacity deployment decisions and evolving network strategies among major U.S. carriers
- Developed route-level profitability models incorporating yield assumptions, RASM/CASM, aircraft economics, load factor targets, and sensitivity analysis to evaluate new U.S.-Japan service opportunities
- Assessed carrier-gateway combinations through a network planning lens, identifying United Airlines as the strongest candidate for nonstop Fukuoka service based on connectivity, cost structure, projected margins, and fleet suitability

Reconnection and Recalibration: U.S.-Japan Air Travel Reorganization

May 2026

- Engineered a seat-density proxy (seats per departure) using BTS T-100 data in R to quantify a structural shift from Narita to Haneda, highlighting operational advantages and network planning implications by bypassing Narita's midnight operational shutdown
- Diagnosed severe leisure demand suppression in the Hawaiian and Guam gateways by correlating load factor drops with macroeconomic indicators, specifically the historical depreciation of the Yen and its cooling effect on outbound Japanese traffic
- Identified a structural shift in seasonal demand volatility, proving airlines proactively curtailed mid-summer seat capacity to chase peak transatlantic yields and stabilize corridor load factors above 82%, identifying clear revenue management implications

The Demand Impact of Bilateral Tensions

May 2026

- Explored the relationship between political friction and international demand through a corridor-level study of the U.S.-Canada markets
- Compared monthly passenger trends against Europe, Asia, and Latin America to isolate Canada's weaknesses throughout 2025
- Interpreted airline and airport-level demand shifts within the context of changing sentiment amongst travelers, economic conditions, and cross-border political tensions

The Block Time Mirage

May 2026

- Analyzed 7.7M U.S. domestic flight records to quantify distortions of DOT on-time rankings
- Built a fixed effects regression in R, isolating true carrier-level delay performance from structural noise
- Identified a 17.6-minute gap between best and worst regional operators under the same marketing carrier, and demonstrated through a natural experiment that SkyWest's delay outcomes vary depending on which airline oversees its operations
- Quantified that carrier identity explains only 3.1% of delay variance, with departure time and airport of origin as the dominant predictors

The Cost of Consolidation

April 2026

- Extracted and processed 2024 domestic fare and flight data from BTS datasets across 156 U.S. commercial airports
 - Analyzed competitive structure across 5,500+ routes to identify monopolistic markets which impact pricing power and route profitability
 - Identified hub-based monopolistic territories across American, Delta, and United, finding 60% of routes operate under single-carrier control, highlighting opportunities for competitive entry or pricing optimization in underserved markets
 - Published findings as an independent research study with full R-based analysis and original data visualizations
-

TECHNICAL EXPERIENCE

Independent Media Brand

Remote, March 2021 - Present

- Maintained and expanded a long-term content brand across 100+ video releases over a 5-year period
- Managed long-term independent creative workflows including scripting, narration, editing, and publishing schedules
- Grew audience reach to 22M+ views and 56K+ followers through experimentation with content format, presentation, and targeting
- Collaborated with other digital media brands and creators to expand audience reach and increase cross-platform engagement

University of New Hampshire | Video Lead – Paul College Influencer Team

Durham, NH | August 2024 – May 2025

- Edited and produced short-form promotional content using Adobe Premiere Pro for Instagram Reels and other social platforms
 - Optimized video pacing, hooks, and formatting to improve audience retention and engagement performance
 - Interpreted analytics and engagement metrics to guide future content strategy and publishing decisions
 - Collaborated with student creators and marketing personnel to develop content aligned with trends and interests
-

EDUCATION

University of New Hampshire | Bachelor of Science in Analytical Economics

August 2022 - May 2026

Nagasaki University of Foreign Studies, Togitsu, Japan

September – December 2025

LANGUAGE & SKILLS

Skills: Microsoft Excel, R, Data Transformation, Tableau, Econometrics, Collaboration, Transportation & Aviation Market Research, Python, SQL, Data Visualization, SEO, Statistical Modeling, Forecasting, Market Analysis, A/B Testing, Adobe Premiere Pro, Network Strategy, Revenue Management, Regression Analysis, Network Planning, Demand Forecasting, Route Economics

Languages: Spanish (conversational), Japanese (conversational)
